**Important Safety Information**

**Read all instructions before using these products. Save these instructions for later reference.**

1. All systems must be installed by a suitably qualified professional only. Installations must conform to national installation and accident prevention regulations.
2. Do not install any fixture closer than 150mm from any combustible material. Do not install these products in a damp or wet location.
3. To reduce the risk of fire and burns, do not install these products where exposed bare conductors can be shorted or contact any conductive materials. Do not conceal or extend exposed conductors through a building wall.
4. Ensure all connections are tight. Bad connections can cause overheating, arcing and a potential fire risk.
5. Always use appropriate optics and ensure they are fitted securely.
6. Use only as described in this Precision Lighting manual.
7. Use only Precision Lighting recommended accessories.
8. Ensure that the luminaire is switched off at mains supply before installing or removing.
9. Luminaires may be extremely hot, allow to cool before touching.
10. These are LED luminaires, they must be connected to an appropriate PSU.
11. Regular cleaning of these products is important. Switch off at mains supply and allow to cool before cleaning. Clean fittings with a soft damp cloth and allow to dry before reconnecting power supply.

1. Installing the luminaire

**WARNING** switch off power to mains before installation.

**1A. 2 Screw Fixing Installation**

Cut hole ø10mm (Slightly more than 3/8 inch). Cut 2 pilot holes for screws 26mm apart as per adjacent drawing.

Feed mains cable through hole and insert rear of fixture into hole. Secure in place using two screws provided.

Replace decorative cover onto fixture.

**1B. M12 Fixing Installation**

Cut hole ø13mm (just over 15/32 inch). Feed mains cable through hole and insert rear of fixture into hole.

**NOTE:** You will need rear access in order to secure it into place.

Put on washer and then screw on M12 nut provided to fasten tightly to secure fixture in place.

Replace decorative cover onto fixture.

2. Electrical Installation

**WARNING** switch off power to mains before installation.

**NOTE:** Due to fixture size, drivers must be located remotely; cut out is too small for dimmable drivers to pass through.

Pico luminaires are polarity sensitive, Red is positive and Black is negative.

When installing more than one Pico luminaires in a circuit, ensure circuit is wired in series. Do not use more than the stated number of luminaires per driver.

**SINGLE PICO**

- Negative (Black) from supply
- Positive (Red) from supply

**MULTIPLE PICO LUMINAIRES - MUST BE WIRED IN SERIES**

- Negative (Black) from supply
- Positive (Red) from supply

**WARNING** Do not connect or disconnect under load.

Ensure driver has not been powered for a minimum of 1 minute before reconnecting the LED module after disconnecting. Do not hot plug. Failure to this instruction will lead to serious damage of the LED module and driver and will not be covered by warranty.

**Note:** Maintain correct polarity when wiring. Incorrect wiring will cause serious damage and will not be covered by warranty. Must be installed according to SELV regulations.

Wire specification: 24 AWG, double insulated teflon wire.

Red = Positive  Black = Negative
3. Changing the Optic and Snoot

**WARNING** switch off power to mains before installation.

To remove snoot, rotate snoot anti-clockwise and lift off.

Once snoot has been removed, the optic can be changed. Remove optic from PCB.

To install new optic, align optic base slots with the PCB and set into place.

Then place chosen snoot over optic and rotate clockwise to securely fix to luminaire. There should be no gap between the snoot and the luminaire body.

---

4. Locking Pan & Tilt

**NOTE** Only adjust luminaire position when unlocked.

Adjust luminaire to desired position. To lock into place, insert hex key provided into pan and tilt holes then rotate hex key clockwise.

---

5. Adjusting the beam angle (Zoom only)

**WARNING** If luminaire has been switched on, it may be hot.

**NOTE** maximum 6mm travel, do not forcefully pull beyond this point.

Gently pull the head of the fixture outwards in order to widen the beam.

Gently push the head back towards the fixture in order to make the beam narrower.
